# A Solution for Enterprise Cloud Protection Needs

**MTPCloud**

## What is cloud?

A network of remote servers hosted on the Internet and used to store, manage, and process data in place of local servers or personal computers.

## What is cloud backup ?

Moving data offsite to a managed service provider for protection. It can either replace or complement on-premise backups.

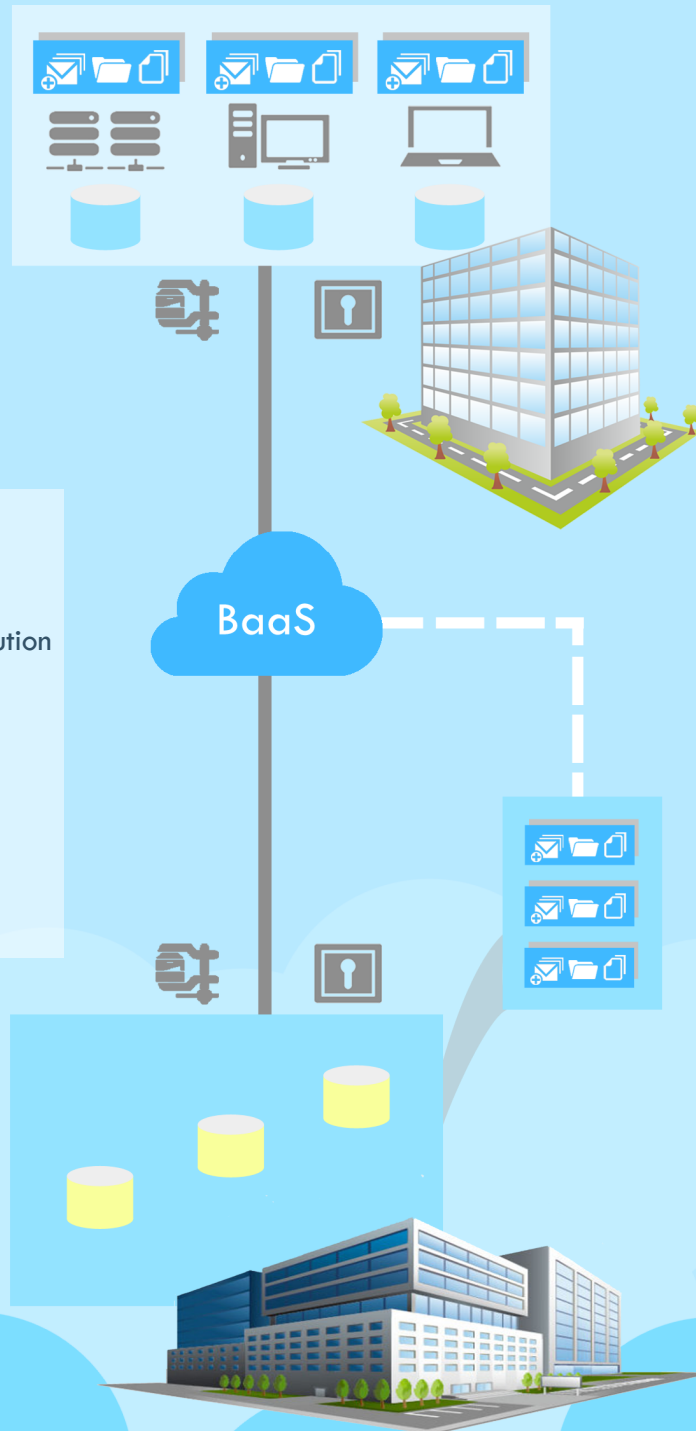

### Keypoint Benefits

- **Application Centricity**  
Copy, store, move, & restore with one simple solution
- **Deduplication**  
Store only one copy of each unique data
- **Flexibility**  
Fully functional & instantly accessible storages
- **Simplicity**  
Radically simple to deploy, manage, and integrate

## Why cloud backup to us ?

Protecting your data as efficient as it should be with single instance protection system, combined with data deduplication feature, it gain benefits to your complex and costly backup facility.

When required, it is possible to leverage functionality of data copy within the cloud and make it become startable system immediately.

## • Local “Copy Data Management”

Managing all copies of data for protection, disaster recovery, business continuity, test and development, compliance and/or analysis.

Any IT infrastructure: virtual or physical.

## • Secured and compressed cloud traffic

Protect your data with secure socket layer (SSL) 128 bit encryption and compressed with deduplication technique, reducing I/O traffic to the cloud.

## • Option to cloud compute

Deliver the unique capability of enabling applications directly use point-in-time copy data, bypassing traditional restore operation.
